Product description

Aerial Acrobatics Frame - Perfect as a Swing Frame for Kids

Yes, you've been waiting for this for a long time – after years of observations and analysis, we've created an alternative frame for home use. This frame is recommended for home users due to its height of 2.3m, which works both indoors and outdoors, in your garden, or at your summer house. Now, you no longer have to limit yourself; you can practice both indoors and outdoors depending on the weather and your vision.

Why choose our HOME frame?

We create professional aerial acrobatics frames, and this frame is a budget-friendly alternative to our professional ones. However, despite its affordability, it is incredibly stable and durable. Foreign manufacturers also offer less professional frames at attractive prices, but those constructions often lack rigidity. That's why we decided to create something BETTER. With our frame, you can train safely and have peace of mind about your health. The steel construction and reinforcements at every connection point ensure comfort and guaranteed stability. This frame is also one of the most affordable devices of its kind on the market. Furthermore, its height makes it ideal for both indoor and outdoor use.

If you need a taller structure, we encourage you to consider one of our professional frames:

PRO FRAME

KIDS FRAME

However, we assure you that the HOME frame is also an excellent choice for both you and your little one.

Our HOME frame offers many advantages in one product:

1. Perfect height for homes and apartments – 2.3m. This allows you to make full use of your room's height.

2. No need for ceiling mounts. If you have a suspended ceiling or are unsure about your ceiling's strength, it doesn't matter anymore. Set up the frame and train with guaranteed safety.

3. Portable and convenient. So, a workout in the living room today, on the terrace tomorrow? :) Or maybe you're planning a trip to the summer house? This frame can go wherever you go!

4. Fits in a car trunk – takes only 5 minutes to pack. Ever dreamed of practicing or taking photos on the beach or in the mountains? Now you have that opportunity.

5. Made of steel, providing great durability and rigidity while using thin-walled profiles.

6. Reinforced at all critical points of the frame. Rest assured, when you buy from us, you're buying from experts. We've been manufacturing aerial equipment for years, and our clients use it worldwide. Each of our products is carefully thought out and designed to meet the high demands of our customers. Your safety is always our top priority.

7. Compatible with aerial hoops, acrobatic hammocks, and vertical silks.

If you have any questions, don't hesitate – call us at +48 690-953-027.

If not, BUY NOW and send us your training photos :)
