Product description

Circus props like aerial hoops or trapezes are frequently covered in colorful cloth tape for a better grip and a unique appearance. Taping is also used for protection, as an apparatus becomes less vulnerable to scratches.

Not sure how to tape your aerial hoop correctly? It's simple!

If you have a single-point hoop, place it on the floor with the handle (point) facing up. Start taping from 5 to 12 o'clock and proceed clockwise. After reaching the handle, go back to the hoop's bottom again and now tape from 7 to 12 o'clock counterclockwise to the point. In the lower part, between 5 and 7 o'clock, a double layer will be created, which will additionally protect the circus wheel in the place where it is most used.

If you want to tape your double-point lyra, start from placing it on the floor with the points facing up so that the center between the handles (points) indicates 12 o'clock. Start taping from 5 o'clock to one of the points clockwise, then go back to the bottom of the wheel and continue sticking your tape from 7 o'clock to the handle counterclockwise. In the end, tape the space between the handles.

Do you prefer to get your apparatus taped?

Just order aerial hoop + 2x tape and write us to tape hoop for you!
