X-Pole XPert (NXN) Chrome 45 mm up to 2,78 m

Price	355.47 Euro
Number	X_POLE_XPERT_45

Product description

The most popular pole model for pole dance training at home in the world and a newer version of the famous X-Pole XPert pole!

XPert NXN is a most popular pole, which perfectly combines functionality with design. You will enjoy it if what you expect from a pole is:

- perfect grip,
- easy assembly and disassembly,
- mobility,
- safety,
- maximum ergonomics.

The NXN has two modes: static and spin. They can be changed using the included Allen key. It gives you more control over the pole than the X-LOCK system of automatic mode switching.

At Flying Rose Store, you'll purchase: X-Pole XPert NXN chrome version, with a diameter of 45 mm!

Why XPert NXN?

The XPert NXN is an enhanced version of the iconic NX pole generation from X-Pole. As the manufacturer emphasizes, the NXN pole provides an even better experience of use. It is more mobile, aesthetic and practical.

The pole is an expansion pole, so you don't have to worry about screwing it permanently to the ceiling. Importantly, the X-Pole gives you a choice. For a permanent fixation of the NXN, the kit can be completed with a ceiling mount. You do not need to use a ladder to adjust the height. If necessary, you can also buy additional extensions or a special cover.

The XPert NXN Pole Dance Tube is foldable for easy transportation. There are no perceptible joints, so it ensures high comfort of use. For safety and convenience, the manufacturer has used the X-JOINT system - a new technology that makes the assembly faster and the pole even more rigid and less stressed.

It should also be emphasized that the XPert NXN is distinguished by an extremely elegant and slim design. Despite its solid structure, it looks very neat and light. In addition, thanks to the small, aesthetic plate, it takes up very little space!

How is XPert NXN different from other versions of XPert?

The XPert NXN pole is very similar to the X-POLE PX PRO but lacks the X-Lock system. This means that changing from static to spin is not automatic. To switch the tube, use the Allen key provided in the kit. In addition, the NXN has a smaller platter than the NX, which makes it look more aesthetic and take up less space. It is also a bit taller (by 10 mm).

Specification

Pole diameter

45 mm

Height

The pole height is adjustable from 2235mm to 2745mm.

Finish:

The pole available from us has a chrome coating, ensuring high aesthetics and perfect grip.
